Introduction

A **DIFFERENT** and **PROFESSIONAL** hanger.

Higher performance in the least space.

They are **HYBRID** hangers with locking stops (**ID**) and a perfect installation to profiles **C** or **STUD**.

MSN-90 V 45 is manufactured with high performance and renovated raw material providing improvements in the vibro-acoustic field.

MSN-90 V 45 is more than a hanger.

It is an acoustic hanger with fast adjustment to first profile **C** o **STUD**. The profile is fixed with a simple gesture making him an **innovative** and **unique product**.

We use the latest technology in the production such as: renovated polymers (**KRAIBURG-TPE**) tested according to **UNE-EN ISO 10846-1:2009** and placed in the sides on the steel spiral. The steel spring is manufactured according to **DIN 2095 UNE EN 10270**, with **GREEN EPOXY** treatment.

Ref. SE-MSN-90 V 45

PATENTED

ACOUSTIC / HYBRID Ceiling

STEEL SPRING: it provides a high level of isolation to vibrations in the range of **low/medium** frequencies (Hz).

RENOVATED POLYMERS: they have a better damping factor and a higher degree of isolation to vibration in the range of **medium/high** frequencies (Hz).

COMBINATION: the combination makes possible launch onto the market the best hanger of the moment and reduce the vibrations in the range of **exciter** frequencies.

It is available in several metrics: 6, 8 and 10.

LOAD RANGE (KG)

It is recommended to loads between **15 kg** and **45 kg** of maximum load.
(Strongly recommended not to exceed this limit in order to prevent overstressing the polymer).

RESONANCE frequency: **3-7 Hz**.

PATENTED

Test layout: 154,6 kg

MSN-90 V 45

In this test, the hanger is subjected to load out of the parameters designed to the product.

We can see steel spring and polymers very compressed.

Test layout: 268,3 kg

MSN-90 V 45

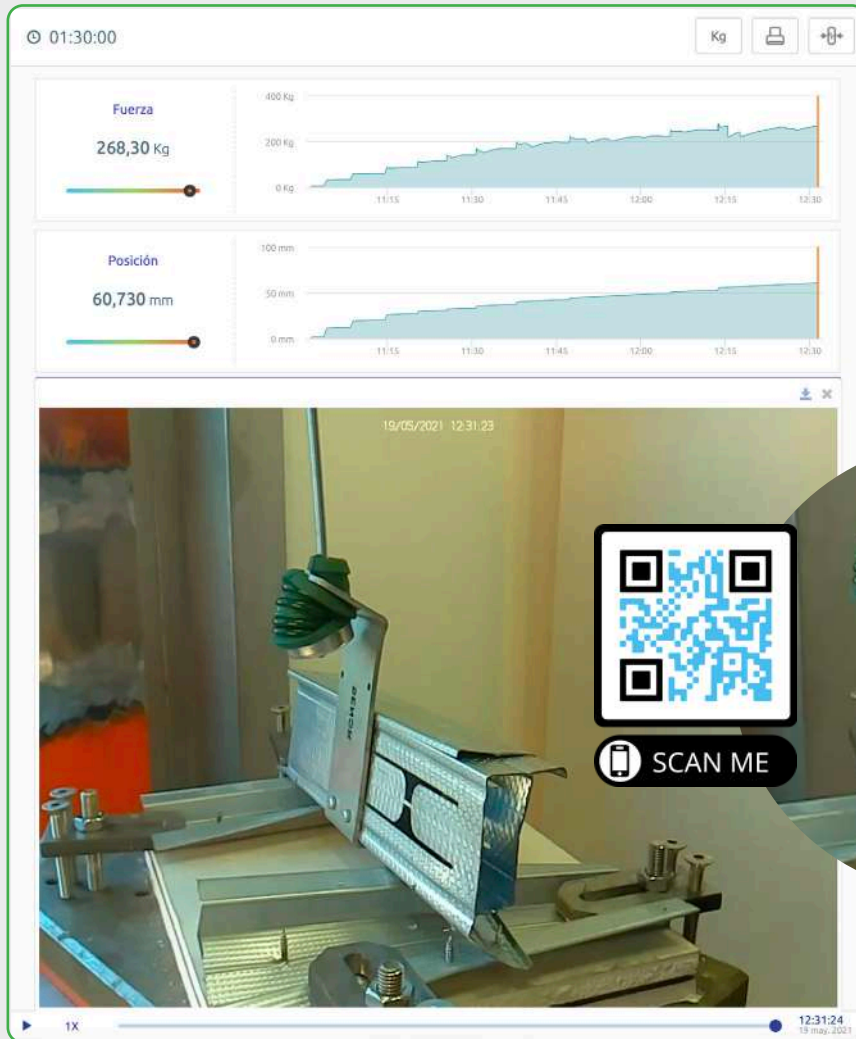

Failure mode.
The components are deformed and the profiles are twisted reaching its elastic limit.

Certificate of Compliance

SENR certifies:

The **MSN-90 model** in the construction range for the suspension of low acoustic false ceilings under slab has an **optimal lifespan of 10 years** provided that the installation is carried out under **ordinary environmental conditions** and are not exposed to chemical components that could degrade the product. The MSN-90 model strictly complies with **UNE** (Spanish Association for Standardization) **UNE 100-153-88**: air conditioning: vibration insulators: design criteria.

SENR declares under its responsibility that the following components for suspended ceiling in buildings strictly complies with the technical sections of installation mentioned in the technical documentation of the product.
