

ROLLER BUSHING

SE-CGT-M6

Product description and intended use

The **CGT**, designed and produced by **SEÑOR**, is a polypropylene roller bushing with a special nut (nut + washer). Thermal break is achieved thanks to the polypropylene, avoiding the transmission of cold and heat. Also, the rotary capacity of this piece allows easy leveling.

Its main purpose is to hang suspended ceilings with metal channel such as Stil Prim 50 (Placo), PH-45 (Pladur), Perfil Sierra SR (Knauf) or similars. This piece is sold with M6 threaded hole.

Installation

In order to install the bushing, it is necessary to enlarge the channel's hole with a 11 mm drill bit. It is very simple and fast. Since the bushing and nut's head is bigger than the 11 mm borehole, security is guaranteed.

Reference

SE-CGT-M6: Roller bushing (metric 6)
This product is available in 100 units bags.

Main benefits

-  Fast and easy installation.
-  Low-cost product.
-  Thermal break.
-  Minimal space loss.
-  It avoids condensations from temperature changes.
