

SENOR TBMF (Anti-Tilt)

SENOR Products
Split DOMESTIC

SENOR

Installation Method

1.

Remove the locking nut, the stainless steel M8 washer, and the protective rubber ring from the FUSIÓN head.

2.

Insert the FUSIÓN head through the corresponding hole located on the leg of the air conditioning unit, ensuring that it fits precisely and securely. This will guarantee a proper and efficient connection for the optimal performance of the system.

3.

Reinsert the protective rubber ring of the FUSIÓN head, place the stainless steel M8 washer over the protective rubber, and finally complete the process by firmly tightening the A4/M8 stainless steel locking nut. This ensures a robust and durable connection capable of withstanding both time and operating conditions.
